

KAISTEEL

MANUFACTURING CAPABILITY

FOSHAN, GUANGDONG

Outdoor product manufacturing experience, metal fabrication capability, order-specific engineering, quality inspection and export packing support.

Public B2B profile | Factory identity and address intentionally withheld

A manufacturing platform for integrated outdoor products

KAISTEEL production is based in Foshan, Guangdong, supported by established capabilities in product engineering, metal fabrication, surface finishing, assembly, inspection and export packing. Factory visits, live video reviews and third-party inspections can be arranged for qualified projects.

15

Years of founder-led experience in the outdoor product sector

Established

Production team

Purpose-Built

Manufacturing facility

Extensive

Outdoor project experience

01

Engineering & drawings

Configuration, dimensions and interfaces confirmed before production.

02

Metal fabrication

Aluminum, galvanized steel and stainless steel processing capability.

03

Assembly & inspection

Order-specific assembly checks and QC records against approved requirements.

04

Export preparation

Protective packing, crate options and container-loading planning.

Indicative platform materials. Final grade, thickness, finish and documentation are confirmed in the approved order.

Component	Material	Key Properties
Structural frame	Virgin aluminum alloy / Q235 galvanized steel	Corrosion-resistant, high load-bearing strength, dimensionally stable
Interior wall panels	Aluminum honeycomb composite panel	Lightweight, moisture-resistant, easy-care surface for outdoor use
Sink & worktop hardware	304 / 316 stainless steel	Food-safe, corrosion-resistant, suited to coastal and high-humidity climates
Exterior panels	Powder-coated aluminum sheet	UV-stable finish, available in multiple colorways

Documentation basis: material certificates, mill test certificates, coating data and component declarations are supplied by the relevant material or component supplier and matched to the approved order where applicable.

Four accountable hand-offs, documented for the destination market

Compliance is not a single blanket certificate. It is a documented chain covering certified equipment, system integration, importer obligations and licensed local connection.

01 Equipment certification

The appliance or gas-equipment supplier provides the applicable product certificates and technical files, including SAA, AGA or equivalent evidence where required for the selected model and market.

02 Cabinet & system integration

The manufacturing site controls cabinet materials, interfaces, assembly, ventilation, protection, QC records and integration against the approved technical specification.

03 File transfer & importer duties

KAISTEEL coordinates the export document package. The appointed importer or distributor retains the legal obligations assigned by the destination market and verifies document sufficiency before placing goods on the market.

04 Local connection & commissioning

Final electrical, gas and plumbing connections, testing and commissioning are completed by appropriately licensed local tradespeople in accordance with local codes.

Project rule: Certificate holder, model coverage, voltage, gas type, expiry date and destination-market acceptance must be checked before order approval. This framework closes hand-off gaps only when each party completes and records its assigned duty.
